	Quiz 1	Quiz 2	Quiz 3	Quizzes
1	10	10	10	30
2	10	10	10	30
3	10	10	10	30
4	10	10	10	30
5	10	10	10	30
6	10	10	10	30
7	10	10	10	30
8	10	10	10	30
9	10	10	10	30
10	10	10	10	30

Absolute & Relative Cell References

Relative

20	40	45	33	18
66	88	47	41	74
25	27	29	40	36
111	155	121	114	128

Notice formula changes as it's copied across to accommodate the different columns

Absolute

20	40	45	33	18	Sales Tax
66	88	47	41	74	9.75%
25	27	29	40	36	
111	155	121	114	128	
10.82	15.11	11.80	11.12	12.48	

Notice the column letters change, but cell address E13 (sales tax location) does not change.

\$A\$4	When copied, column and row don't change
A\$4	When copied, row doesn't change
\$A4	When copied, column doesn't change

```

Private Sub Worksheet_Change(ByVal Target As Range)
    If Target.Count > 1 Or Target.Column = 4 Or Target.Column = 8 Then Exit Sub
    If Target.Column = 1 Or Target.Column = 2 Or Target.Column = 3 Or Target.Column = 4 Or Target.Column = 8 Then
        Target.Value = "X"
    Else Target.Value = ""
    End If
End Sub
    
```

1. Original Name

**2. Try To Chngae The Name
...Press Enter**

3. Original Name Restored

The following code will allow you to select cell A7, on the sheet called Sheet 5: Worksheets("Sheet5"). Activate Handling the Selection Object in VBA Once you have selected a cell or cell range, you can refer to the selection object to manipulate these cells. Stop looking for VBA code online. The following code will select the last non-black cell that would be E1 in this case, if A1 is the active cell: Range("A1").End(xlToRight). Select the Current Region in VBA You can use the Current Region of the Rank Object to select a rectangular range of white and non-black cells around a specific input cell. The following code will select the last non-black cell that would be A4 in this case, if A1 is the active cell: Range("A1").End(xlDown). Select the last non-black cell in a row Let's say it has data in cells A1, B1, C1, D1, and E1 and you would like to select the last non-black cell that would be the E1 cell in the row. If I could suggest a little mod to the code of HalfAce... The following code will select all cells in a worksheet. Many times, a person will adjust the profile settings so that only those on your friend's list can see the number. You can manipulate the selected cell or range using the selection object. Sub UsoConEndConSelection(). Interior.Color = vbGreen Photo Courtesy: John Sunday/Unsplash Internet is your best friend when searching for cell phone numbers. People are sometimes disconcerting to hand over a friend's number, but if you explain why you want it, they'll probably give it to you. Learn more about AutoMacro - A VBA code builder that allows beginners to code procedures from zero with minimal coding knowledge and with many time saving functions for all users! More information! Select the last non-black cell in column Let's say that you have data in cells A1, A2, A3 and A4 and that you would like to select the last non-black cell that would be A4 A4 in the column. Some tools are free to use while others may charge a nominal fee. It's easy to do this by using the worksheet objects change event. If you have data in cell A1, B1 and C1, the following code would select this region around cell A1: Range("A1").CurrentRegion.Select So the range A1:C1 would be selected. In this case I wanted to run a macro when a cell in Sheet1 changes. The following code selects the cells A1:C1 and sets the font of these cells to Arial, the font weight to bold, the font style to italics and the fill color to green. (There are "quicker" ways to write this but they're a bit less intuitive.) Am I understanding what you're looking for? The following code will select the first row in your worksheet: Select a Column You can select a certain column in a worksheet using the Column object and the index number of the column you want to select. You can use VBA to do this and the Range.End method. .xlam add-in. Private Sub Worksheet_SelectionChange(ByVal Target As Range) If Target.Count > 1 Then Exit Sub If Target.Column = 1 Or Target.Column = 4 Or Target.Column = 8 Then If Target.Value = "X" Then Target.Value = "" Else Target.Value = "X" End If End Sub Hope it helps. This opens the code window for that sheet object. There are a variety of sites and tools that make it simple to perform a cell phone number search. Take for example a person uses the username qAAAEasyMoney123eAAA on Reddit. Use a People Search Engine There are people search engines that are dedicated solely to showcasing people-related information. The following code shows you how to select cell B2 which is 1 row and 1 column relative to cell A1: Range("A1").Offset(1, 1).Select Select a Named Range in Excel You can select Named Ranges as well. The following code will select A1:A9 and B11:B18: Range("A1:A9, B11:B18").Select Select All the Cells in a Worksheet You can select all the cells in a worksheet using VBA. Ask for the laVyb(oiImaC noiceles teehskroW bu's odavirP. oirausu ed ermbon le acsub detsu odnauc adeuqsAb al ed ecidnA ed oremAn le y alif atreic anu ranoiceles edeupP alif anu enoiceleS .soitis sorto ne oirausu ed ermbon omsin le esu anosrep al euq ed dadilbisop aneub anu yah. 4A :1A oturf odarbmom ah euq somagID .orcram al avitca euq adlec al abmac edmod ajoh al ed ermbon le ne cilc eblood rcah ebud oremirP .cisaB lausiv ed rotide le ne .oremAn le rop anosrep al ed lifrep le neugsub euq agah .ogima us se euq neigla e econoc orep .oremAn us rev edeup on y selacois seder sal ne anosrep He saves the writing and generally makes his code more easier to read. The next code will select A1 : C5. Select a range of non-adjacent cells using VBA can select cells or ranges that are not one next to each other, by cells or ranges using a VBA comma. Type the person's name for which you want a number in one of these search engines and wait for the results. Use social media networks is another great online tool to find a person's cell phone number. Hi Anne, if I understand your request, then maybe something like this. If you did, you'll probably find it in one of the search results. If the cell contains more than a Capitol X, (or is blank), it will be replaced with a tiny X. A popular use of this capacity is to make the custom code validate a cell after a change is made. Search by user name Do you know the person's user name for a particular platform?
